You will be billed in Euro so USD prices are for information only
shipping will be on top of the price (3.80 euros for 2 small altimeters or 1 large altimeter and accessories).

	Price in Euro	Price in USD	Euro/dollar Exchange rate	Description
Alti Uno 			1.06	This is a 1 pyro output kit that can be manually assembled. Output will fire at apogee
complete kit	20	21.2		
Kit already assembled and tested	22	23.32		
Alti Duo Mini 				This is a 2 pyro output kit (dual deployment) that can be manually assembled. Output 1 will fire at apogee and output 2 will fire 50m, 100m, 150m or 200m (jumper selectable) before landing. Note that the altimeter can be re-programmed on request in order to be used as a timer (ask when ordering). Using the timer you will be able to fire pyro out1 1,3, 5 or 7 second after lift off and pyro out2 2, 4, 6, or 8 second after lift off.
complete kit	22	23.32		
Kit already assembled and tested	24	25.44		
Alti Duo Mini plus 				Same has the AltiDuo mini however it has one additionnal connector for a switch
complete kit	24	25.44		
Kit already assembled and tested	26	27.56		
Fully assembled SMT altimeters				
Alti Uno Smt  	27	28.62		This is a 1 pyro output SMT board. Output will fire at apogee

AltiDuo SMT V2 (identical to the other one but smaller and can use 3.7v batteries) 	32	33.92		This is a 2 pyro output SMT board (dual deployment) . Output 1 will fire at apogee and output 2 will fire 50m, 100m, 150m or 200m (jumper selectable) before landing. Unit can be metric or imperial
AltiDuo SMT + 1 battery	36	38.16		
AltiDuo SMT + 1 battery + charger	39	41.34		
AltiDuo SMT + 2 batteries + charger	42	44.52		
AltiDuo SMT micro (the smallest dual deployment altimeter it fits in an 18mm tube and it comes with a battery and has a switch)  				This is a 2 pyro output micro SMT board (dual deployment) . Output 1 will fire at apogee and output 2 will fire 50m, 100m, 150m or 200m (jumper selectable) before landing. Unit can be metric or imperial
AltiDuo micro + battery + charger	45	47.7		
AltiMultiV2 (SMT and throught the hole components) Atmega 328 and configured via the Android app 				This is a 3 pyro output altimeter that can be configured using the Bearconsole Android application. It can use a USB cable, a bluetooth module or a 3DR telemetry module.
AltiMultiV2 fully assembled	35	37.1		
Bluetooth module	5	5.3		
USB programing cable	5	5.3		
AltiMulti STM32 is an STM32F104 shield that comes fully assembled with the STM32 board configured to use the Arduino environment 				This is a 4 pyro output altimeter that can be configured using the Bearconsole Android application. It can use a USB cable, a bluetooth module or a 3DR telemetry module.It has a second serial port (on top) that you can use for a GPS module or any other serial module. You will have to write your own code to take advantage of it

AltiMulti STM32 fully assembled	37			
Bluetooth module	5			
USB programing cable	5			
AltiMulti ESP32 				This is a 4 pyro output altimeter that can be configured using the Bearconsole Android application.
AltiMulti ESP32 fully assembled	40			
USB programming cable	5			
AltiServo SMT using an ATMega 328 				This board is driving servo's instead of pyro output. It could be used to eject boosters or in a water rocket. Again it can be configured using the BearConsole Android application.
AltiServo	30			
Bluetooth module	5			
USB programing cable	5			
				For all altimiters but SMT's use 2.5mm screws. For SMT's use 2mm screw
2 mm screw and spacer (4 of each)	1	1.06		
				Those are to attach your charges, the screws are like wires. Make sure that you protect those from the ejections charges fumes
Charges terminal blocs per pair no screws	3	3.18		note that you can replace the screws by copper wires
Charges terminal blocs per pair + screws	4	4.24		
cable adaptors				Those are used for programming telemetry modules or bluetooth module using a ttl cable. 3 different types are available

per piece	2	2.12		
Jumpers 				
Jumper (Per 10)	1	1.06		
Test Stand Board 	45	47.7		Can only measure motor Thrust. Connect to an Android phone and share the results using whats app, email etc … Can export thrust curves as eng so that it can be used by OpenRocket or Rocksim. Load cell not included
Test Stand Board V2 	50	53		Can measure motor Thrust and pressure inside the casing. Connect to an Android phone and share the results using whats app,email etc .. Can export thrust curves as eng so that it can be used by OpenRocket or Rocksim. Load cell and preasure sensor not included.
